

Potential discussion 2 questions:

- 1. Would you think a similar bed locator service would still be useful today? Which components would you keep? Which components would you modify?**
- 2. What are your thoughts on the outreach coordination system? If it was still in place, what components would you keep the same? Which components would you modify?**
- 3. What are some alternative funding sources for a bed locator tool and regional coordinators today?**
- 4. After what you have heard today, are there services aside from the ones we have discussed that might be helpful?**
